SUMMARY

Platform engineer focused on developer experience, reliable delivery, and low-toil operations. I turn fragile deployment paths, local-dev friction, and tribal operational knowledge into systems teams can trust so developers can focus on shipping value instead of fighting the machinery.

SKILLS

Platform / DevEx	Internal platforms, CI/CD, deployment systems, local development, self-service workflows	Infrastructure	Kubernetes, GKE, EKS, Terraform, Pulumi, Helm, Kustomize, ArgoCD, GitOps
Reliability	Observability, incident response, on-call process, production recovery, Datadog, Prometheus, Grafana, Loki	Languages / Build	TypeScript, Node.js, Python, Go, Bash, Dagger, GitHub Actions, CircleCI

PROFESSIONAL EXPERIENCE

Platform & Infrastructure Engineer — Motion / Wonderly Apr 2025 – Jun 2026

- Built and maintained CI/CD tooling for large TypeScript and .NET monorepos, improving the speed, reliability, and clarity of developer feedback.
- Operated Kubernetes and GCP infrastructure with Helm, Kustomize, ArgoCD, Pulumi, and GCP Secret Manager.
- Improved CircleCI, WCI, Dagger, and GitHub workflows for safer delivery, clearer failures, and lower operational toil.
- Built oncall-bot, an AI-assisted incident workflow for root-cause analysis and remediation that helped resolve 40 infrastructure issues in one week through focused PRs.

GCP · GKE · Kubernetes · ArgoCD · Helm · Kustomize · Pulumi · CircleCI · Dagger · Datadog · TypeScript · .NET · AI

Senior DevOps Engineer — Arturo AI Oct 2024 – Mar 2025

- Created AWS infrastructure through Terraform for production engineering teams.
- Built modular CI/CD pipelines that enabled developers to ship their own Terraform changes safely.
- Created reusable Terraform modules to encode company standards and reduce repeated infrastructure work.

AWS · Terraform · CI/CD · Infrastructure as Code · Bash · Python · JavaScript

Platform Engineering Architect — TAB Bank Feb 2022 – Sept 2024

- Took over the DevOps team and reframed the work around platform engineering, standards, reliability, and developer enablement.
- Stabilized inherited Kubernetes systems and architected EKS migration work.
- Onboarded ArgoCD and developed Cue-based configuration management for repeatable multi-environment delivery.
- Participated in on-call rotation, production system recovery, and incident response for regulated banking systems.

EKS · Kubernetes · ArgoCD · Terraform · GitOps · Cue · Prometheus · Grafana · Loki · Production recovery

CTO / Co-Founder — Let's Go Give Aug 2020 – Feb 2022

- Developed frontend and backend applications for a bootstrapped charitable-giving product.
- Implemented Nix/direnv tooling for fast, stable onboarding on Mac and Linux.
- Implemented Tilt and Kubernetes workflows for local development and deployment iteration.

TypeScript · React · Node.js · PostgreSQL · GKE · Kubernetes · Tilt · Kustomize · direnv

Sr. Software Developer — Parakeet / Brivo

Aug 2019 – Jun 2021

- Led technical debt remediation including Kubernetes migration, Python 2.7 to 3.9 upgrade, Python typing, and restored tests.
- Managed CI/CD with Bitbucket Pipelines, QA auto-deploys, migrations, tests, and branch deploys.
- Instrumented a large-scale integration framework and fixed several long-standing production issues.

Python · Django · PostgreSQL · Kubernetes · Pulumi · FluxCD · Helm · CI/CD

Software Engineer — Domo

Mar 2015 – Aug 2019

- Designed and built Kubernetes-backed developer environments and platform tooling for service stacks.
- Built CLI and GUI tooling for creating, destroying, tunneling into, and operating leased development environments.
- Built logging infrastructure, certificate automation, registry caching, and Kubernetes authentication bridge work.

Kubernetes · TypeScript · Node.js · Go · Java · Python · Jenkins · Docker

SELECTED PROOF POINTS

Developer friction: Repeatedly turned fragile deployment and local-development paths into clearer tools, workflows, and paved roads.

Production operations: Worked across observability, incident response, on-call support, and recovery in startup, product, and regulated banking environments.
